3. /getClarityData

This call retrieves data from Breathe London Communities nodes. The call takes in [SiteCode](#) as a parameter which can be obtained from the /ListSensors call. The call also takes in a [species](#) parameter - currently this is either [IPM25](#) for PM2.5 or [INO2](#) for NO2 data. Please note the spaces in-between the [startTime](#) and [endTime](#) parameters. These spaces can also be send as %20 encoded. Lastly, the call takes [averaging](#) as a parameter. Currently this is [Hourly](#). Below is an example call and example return.
